Choose one science career (either one mentioned during this lesson, or another one approved by the teacher), and explore it in greater depth.

Present your findings, either in an **oral presentation** or a **written report**, as instructed by your teacher.

Be sure to include general information about the particular career, as well as answers to these questions:

- What does a typical day doing this job actually look like?
- What are examples of places where a person with this job might work?
- Who are people who a person with this job might frequently interact with?
- What training (courses, college major, graduate school, work experience) is necessary to obtain a job in this field? How many years long is each stage of this training?
- What skills are helpful to have (other than interest in science) to do this job?
- Are there internships and/or courses that high school or college students can participate in, to help them decide whether they might want this job?
- What is the average salary for a job like this?
- What are the main pros/benefits, and downsides/challenges, of this job?
- Would you personally consider having this type of job, and why or why not?
